

PROOF OF CONCEPT (IMPLEMENTATION)

Mona Ghai

November

Introduction

The project entails making Mendeley (citation ref tool) communicate with hypothes.is (online tool) [Earlier was considering Zotero but due to some practical problems now taking Mendeley]. The Citation Tool is used in the arena of academic social network which aids in the organization of research and collaborating with the research done online. The hypothes.is brings up a conversation taking place with the consideration of entire web. The tool is used in order to hold discussions and organize the research in the most effective manner.

Understanding the Proof Of Concept Technology

The POC or the Proof of Concept experiment would be intended to show the program with the deployment taking place in the real world. The critical part would be the prototype that is being developed and the same can be tested too in the environment. The customizable solution is being implemented here with the making Mendeley (citation ref tool) communicate with hypothes.is (online tool).

STEPS:

- Demonstrate how to use Mendeley and integrate it with Hypothes.is
- Demonstrate Hypothes.is
- Demonstrate instructions linking Mendeley and Hypothes.is

CREATING MENDELEY ACCOUNT AND HYPOTHES.IS ACCOUNT

- Go to Mendeley's website, click on 'create account'
- Set up profile
- Link Mendeley to chrome and set up Web Importer plugin.
- Import and Insert references
- Generate Bibliography
- Create Hypothes.is account
- Install Hypothes.is toolbar and bookmarklet
- Highlighting and Annotating in Hypothes.is
- Use R.ris to write out citation file and import it to Mendeley.

HIGHLIGHTING TEXT IN DIGITAL DOCUMENT

- Go to the webpage in chrome to highlight
- Click on Hypothes.is icon in toolbar
- Click resize sidebar
- Log in your Hypothes.is account
- Choose highlight to be public or private
- Select the text to be highlighted
- Click on the highlight icon.

TEXT ANNOTATION

- Go to a web page in chrome to annotate
- Click on Hypothes.is icon in toolbar
- Click on resize sidebar
- Log in your Hypothes.is account
- Choose highlight to be public or private
- Select text to be annotated
- Click on annotate icon
- Type annotations in text box
- Type tags for annotations
- Select where to post annotations, whether private or public

I tried to link Hypothes.is with Mendeley but was unable to do so.
